# XProtect® clients

The Open Platform Company

## Experience the power of choice

Milestone XProtect video management software (VMS) is easy-to-use, yet powerful software for controlling surveillance from the most basic recording needs to high-security installations with constant live monitoring. For easy access to video surveillance, Milestone offers three flexible user interfaces: XProtect Smart Client, XProtect Web Client and Milestone Mobile. Compatible with all XProtect VMS products, XProtect clients enable users to access live and recorded video to gain real-time situational awareness and investigate incidents.

XProtect clients share common design and basic functionalities so users can seamlessly switch between the interfaces as needs require. All XProtect clients allow users to control

pan-tilt-zoom cameras (PTZ) to investigate suspicious activity. Users can also play back video to locate incidents and share or export recordings as evidence. With support for output control and event triggering, such as opening/closing doors and switching lights on/off, users gain control over their installation whether they are on-site, off-site or on-the-go.

Available for free in 26 languages, XProtect clients give users the freedom to choose the viewing interface that best suits their needs.

## XProtect® Smart Client

*For daily surveillance; from basic to advanced needs*

XProtect Smart Client is the primary user interface for security operators and other daily users. Its adaptable user interface provides both basic and advanced users with an interface optimized for their particular tasks.

### Situational awareness

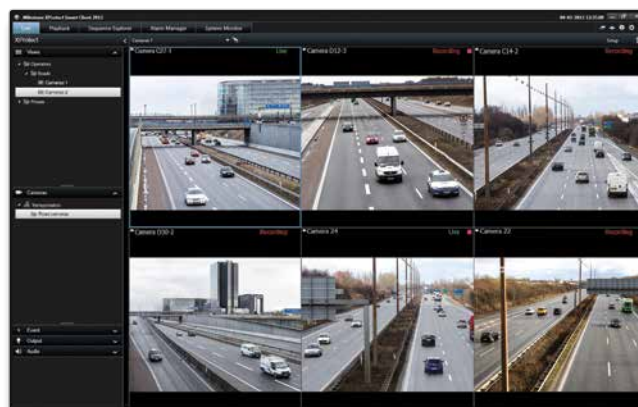

Multi-layered maps allow users to easily navigate installations by interactively accessing and controlling cameras, devices and other integrated systems. Multi-camera selection in maps allows operators to open all cameras and display them on another monitor for quick incident detection. An alarm list helps operators focus on the most critical security and system alarms so they can quickly screen alarms and take action.

### Easy to search for and export evidence

Video search tools combined with an easy-to-navigate timeline enable fast and accurate examination of incidents. Evidence can be exported in multiple formats in one step and comments can be added so operators can provide important information when handing over evidence to authorities.

### Customize the surveillance

Third-party applications, such as video analytics and access control, can be integrated into XProtect Smart Client through a unique plug-in capability, providing users with one unified interface for multiple systems. This makes operating multiple systems more efficient because operators can manage all aspects of surveillance from one interface.

# XProtect® Web Client

*For basic capabilities; from any Internet-enabled computer*

XProtect Web Client provides flexible access to video surveillance systems and can be used as the simplified daily viewing client for users with basic needs. It allows users to view, play back and share video through any Internet-enabled computer or device.

## Instant access to video surveillance

XProtect Web Client also provides high-security installations with instant access to video recordings and the ability to preview and export evidence from any computer. With no need to install additional software on the client computer, users can monitor their XProtect system from the most common browsers and computer operating systems, including Mac® computers.

# Milestone Mobile

*For surveillance on-the-go; from smartphones and tablets*

Users can access surveillance on-the-go with Milestone Mobile, an application for viewing, playing back and exporting video. Available for download on the App Store<sup>SM</sup> and Google Play<sup>TM</sup> and Windows Phone Store, the application gives instantaneous access to XProtect systems via Wi-Fi, 3G or 4G connections.

## Video surveillance in your pocket

With Milestone Mobile, users can always stay connected to their video surveillance system and ensure everything is running smoothly. Video Push\* turns the mobile device into a portable evidence collector. Using Milestone Mobile, security staff can relay live events and extend the visibility of central monitoring stations. Patrol personnel can document incidents with the device's camera and push the video directly into XProtect VMS, which records it in the same way as any other video camera.

## Product comparison chart

Key features	Milestone Mobile	XProtect Web Client	XProtect Smart Client
User platform	Smartphones and tablets	Web browsers	Microsoft® Windows® computers
View video, play back recordings and control PTZ cameras	✓	✓	✓
Output control and event triggering	✓	✓	✓
Share and export video	✓	✓	✓
Client interface available in 26 languages	✓	✓	✓
Video Push	✓		
View and respond to alarms			✓
Support for maps			✓
Advanced video export			✓

\*An additional camera license is required for each user of Video Push. The price of the camera license is determined by the user's XProtect VMS product. Information stated in this flyer about XProtect clients refers to XProtect platform products only.
